MFB Building Inspection

At present the data regarding inspections as per Maharashtra Fire Prevention and Life Safety Measures Act 2006 is generated and preserved in hard copies. It is very bulge record and needs to be streamlined with provision of software. All the inspections reports, notices, compliance reports, etc carried out as per Maharashtra Fire Prevention and Life Safety Measures Act will be complied in soft copies which will be easier to generate analysis to Mumbai Fire Brigade department.

Present Scenario:

- Department is unable to track the fire security facilities made available by establishments (residential, commercial, various other) and MIS availability for authorities.
- Do not facilitate administration to maintain central database for fire security arrangement made available by respective establishment.
- Lengthy and Time-consuming manual process.
- Difficult to collect RTI data.
- Do not efficiently track the inspections at various stages with timelines and escalations.
- No real time tracking of building with GIS (Google Map), GPS facility is possible.

Benefits:

- Track the fire security facilities made available by establishments (residential, commercial, various other) and MIS availability for authorities.
- Facilitate administration to maintain central database for fire security arrangement made available by respective establishment.
- Create a central MIS system for inspection purposes so that authorities won't waste time manually searching through registers.
- Provision availability of RTI data through the system.
- Efficiently track the inspections at various stages with timelines and escalations.
- Real time tracking of building inspections with GIS (Google Map), GPS facility.
