The efficiency of filtration of sand beds decrease over a period of time due to clogging by suspended impurities and micro flocks present in water. Hence to maintain the filtration efficiency each bed is unclogged by backwashing the sand in bed. The process of backwashing is repeated for all 18 nos. of beds with fixed time interval. The process of backwash involves unique 900 mm dia PID Controlled tyco make butterfly valve on main backwash inlet pipeline. The two preset flow values during filter bed backwashing process is obtained by smart controlling the Tyco make Butterfly valve on backwash inlet line through PID controller. The proper operation of this valve is very crucial as backwashing process is totally reliant on the proper operation of this unique valve. Two no's of Tyco make Butterfly valves with pneumatic actuators are at Filter plant M-III A Panjrapur.
